Technology-Enhanced Learning (TEL) Committee
AMEE2023 E-Poster Prize
Author Information

Background
E-posters are a valuable mode of information delivery at academic conferences. AMEE has been an innovator in having e-posters at its annual conferences. Since 2019, the AMEE TEL Committee has awarded an e-poster prize, and the prize will be awarded again in 2023. The judges will be formed from the TEL Committee and from other suitably qualified persons.

Eligibility for the Prize
To be eligible for the prize:
- The e-poster must have been created for the AMEE2023 Conference.
- At least one author listed on the poster must be registered and physically or virtually present at the AMEE2023 Conference.
- In Learning Toolbox, the author must have marked their e-poster as ready to publish by 1st July.

Aim
The aim of the prize is to select examples of good practice in preparing medical education e-posters. This means that we expect candidates to show that, by using and exploring the e-poster technology, they have improved an otherwise traditional poster.

Judging
Judges have not submitted e-posters to AMEE2023. Judging of the e-posters will be as follows:
- **Round 1**: From 2nd July 2023, the e-posters will be allocated to the judges. This means that, if you are aiming for the prize, your e-posters must be marked as ready to publish and be as complete as possible by 1st July 2022. (You will still be able to make changes after that date, but those changes might not be taken into account by the judges.)
- After an initial selection from each judge, a shortlist for Round 2 will be created.
- **Round 2**: All posters on the shortlist will be sent out so that each e-poster will have been judged by at least three judges.
- Based on the final scores, the e-posters will be ranked.
- The judges will reach consensus, and the top three e-posters established.
- The winners will be announced at the AMEE2023 final plenary session.

Prize
The First Prize winner will receive one free AMEE Conference registration, or a cash prize of £350.

E-Poster design
A good e-poster is not simply a paper poster in pdf format (or a few small tiles plus a pdf of the e-poster), and authors should ensure that their e-poster appropriately uses the technology. As a guideline, authors should:
- Read How to make an effective e-poster. (Note: This is a generic guide to e-poster design, and not all items will be applicable to the e-poster software currently used by AMEE);
- Read the judging criteria, and
- Visit the AMEE e-poster Showcase to see the e-posters from previous conferences at: https://my.ltb.io/#/showcase/amee
